

## OUR LINEAR MOTORS

Even more LMSA power packs!

With the new LMSA0 and LMSAC linear motors, we are expanding the sizes of our LMSA linear motor series. They are especially skilled in compact and demanding applications in the handling and automation sector.

### Properties:

- Highest power density
- Flat, compact design
- Permanent magnets in the stators are cast in the epoxy resin
- High acceleration
- High synchronous run
- Max. intermediate circuit voltage: 750 VDC

Our linear motors in the LMSA series always stand out for their extremely high power density and very flat design. LMSA linear motors from HIWIN – the ideal drive when large feed forces meet the smallest installation spaces.
