

OUR PRECISION SYSTEMS

Cross tables and gantry – standardized systems also customized

How standardized drive components from the modular system become customized precision systems. Thanks to the modularized design, our standard cross table and gantry system can be customized to fit your requirements precisely and efficiently. This modularity enables fast quoting

and short delivery times. Prefabricated drawings as well as 3D models are available on our website. Minimize your effort and cost in development by using standard systems directly! Our application engineers are ready to create a concept for your application.

Features:

- Highest straightness and flatness
- Absolute positioning accuracy
- Dynamic motion
- Compact footprint
- Numerous options such as encapsulation, motor type and encoder system can be customized
- Also with granite base
